

We Recommend a Premier Eye Exam

All patients should have a premier eye exam instead of a standard exam as this allows everyone to best respect social distancing. Although this exam has been offered previously, it is now more important than ever.

Premier eye exams use advanced new technology:

Retinal imaging

Optical coherence tomography

Computerized visual fields

As simple as the click of a camera, you sit next to your doctor as he reviews the photos of the interior of your eye. The doctor can see the interior of your eye and is able to identify other conditions which are visible in the back of the eye, such as diabetes, high blood pressure and high cholesterol.

Standard vision care insurance does not cover these advanced exams. Please see the page which explains the tests and fees.

DR. EDELSBERG AND ASSOCIATES

Canon CR1 Digital Retinal Examination
Oculus Easy field C Perimeter
Zeiss Stratus Optical Coherence Tomography

We pride ourselves on providing our patients with the best possible standard of care; because of this we now perform the Canon CR1 Digital Retinal Examination, Zeiss Stratus Optical Coherence Tomography, and the Oculus Easy field C Perimeter. These technologies are recognized throughout the medical community as a useful adjunct in the diagnosis and treatment of eye disease.

These noninvasive procedures are new technologies that allow for a more detailed understanding of the retina and optic nerve than is possible with conventional methods. When reviewed these images become a permanent part of your medical file, enabling Dr. Edelsberg and Associates to make important comparisons should potential vision threatening conditions show themselves at a future examination.

The Oculus Easy C Perimeter is a method of exploring the individual's entire scope of vision. Several serious conditions can be detected. These conditions include, but are not limited to, glaucoma, retinal detachment, retinitis pigmentosa, tumors affecting the optic nerve, and undetected stroke. The Zeiss Stratus Optical Coherence Tomography allows for high resolution cross sectional imaging for the comprehensive management of glaucoma and retinal disease.

Dr. Edelsberg and Associates strongly believe that these tests are an essential part of your comprehensive eye examination and that they should be done annually.

The fee for each procedure is **\$33.00** and is generally **not** covered by insurance unless it is being used to follow a previously diagnosed eye disease. You may decide to have all of the tests, one test, two tests, or no tests. Please indicate your decision below:

Canon CR1 Digital Retinal Examination: _____Accept _____Decline (please initial)
Oculus Easyfield C Perimeter: _____Accept _____Decline (please initial)
Zeiss Stratus Optical Coherence Tomography: _____Accept _____Decline (please initial)
